

MEDICAL INSTRUMENT

ABSTRACT

Medical instruments and methods of using the instruments are described. In some embodiments, a medical instrument includes a housing, a stylet having a portion in the housing, and a cannula having a portion in the housing. The stylet has a portion in the housing and is movable between a first extended position and a first retracted position. The stylet is configured to rotate when moved from the first retracted position to the first extended position. The cannula coaxially receives the stylet and is movable between a second extended position and a second retracted position.
